

Consider HSS for your hip revision

Hip Revision Scorecard

HSS

HSS has developed a new tool called the **Hospital Reliability Scorecard**. The tool features five factors that are important to consider when choosing the best hospital for your needs, so you can better evaluate your options.

This scorecard provides data specific to hip revision at HSS. But you can ask any hospital for this data, no matter what surgery you need.

Why the 5 factors of reliability are important

Not all hospitals are the same. Some are more reliable than others. And this difference can increase the chances that you'll experience a setback, such as a complication in the hospital or something else that happens once you're home. The five factors can help you protect yourself from these avoidable risks. Find out which data to ask for and learn why the five factors matter to your health.

About hip revision

What

Orthopedic surgery to remove and replace all or part of a failed hip replacement implant with a new prosthesis and/or to address other complications resulting from a previous hip replacement. Also called "revision total hip replacement."

Where

Takes place in a hospital with appropriate expertise and resources.

Length of Hospital Stay

Depending on the procedure and your overall health, a typical hospital stay is 2 to 3 days. More complex cases may require additional time.

Testimonials

"Truly Miraculous! Back at work in 4 days. Climbed 48 stairs every morning in the NYC subway system after 1 week. Played in and won a tennis tournament after 5 weeks."

Hospital Reliability Scorecard

HSS

It's important to make informed decisions about your care. The following questions were designed to help you better understand the differences in how well a hospital performs your procedure for so you can avoid unnecessary risks. Ask your provider for this data. Much of the data is also available at www.medicare.gov/care-compare
